Labor-market signal

Every figure on this view is the labor-market signal for occupations this competency maps to. The mapping path is shown with each figure; nothing here measures the effect of Elevate, and no figure appears without its source, series, period and retrieval date.

Not yet built. The labor-market layer is being rebuilt from the September 2026 degree, occupation and wage dataset (spec 15). Until it is imported this view shows no figures; no number is carried over from the earlier sample data.

Method note

Figures describe occupations a competency maps to; they do not measure what Elevate causes. The mapping is a stated judgement with a rationale on each link, and Analyst mode shows the raw record behind every path.
